## GELV SHORT SELLERS

Short sellers have actively shorted GELV recently and the price has fallen as a result. Shorts have become aggressive since late 2009 and the activity has warranted that Buyins.net carefully monitor market makers and short sellers for Reg SHO compliance.

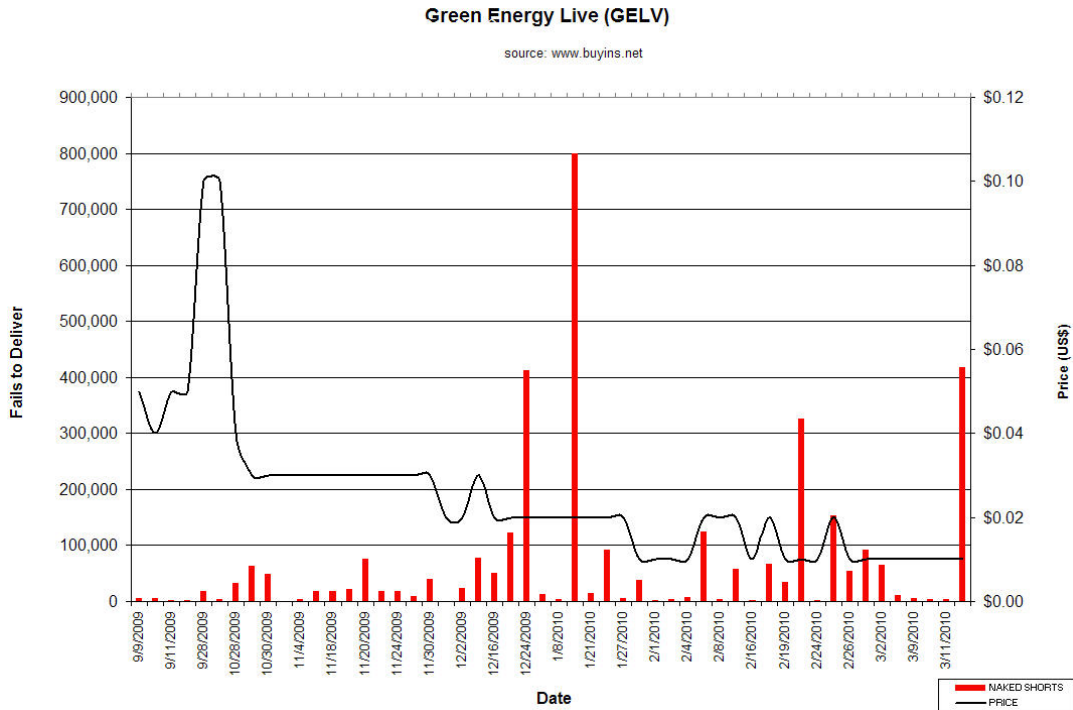

## OVERVIEW OF GELV SHORT SALE DATA

After careful analysis of GELV short sale, naked short sale and market maker friction factor data it is clear that GELV is having issues with short sellers which have decreased the company's market capitalization. Short sellers have been

building a sizable position in shares of GELV and market makers have been making a negative market in the stock overall but with a bullish bias on days with abnormal trading. New evidence of daily short

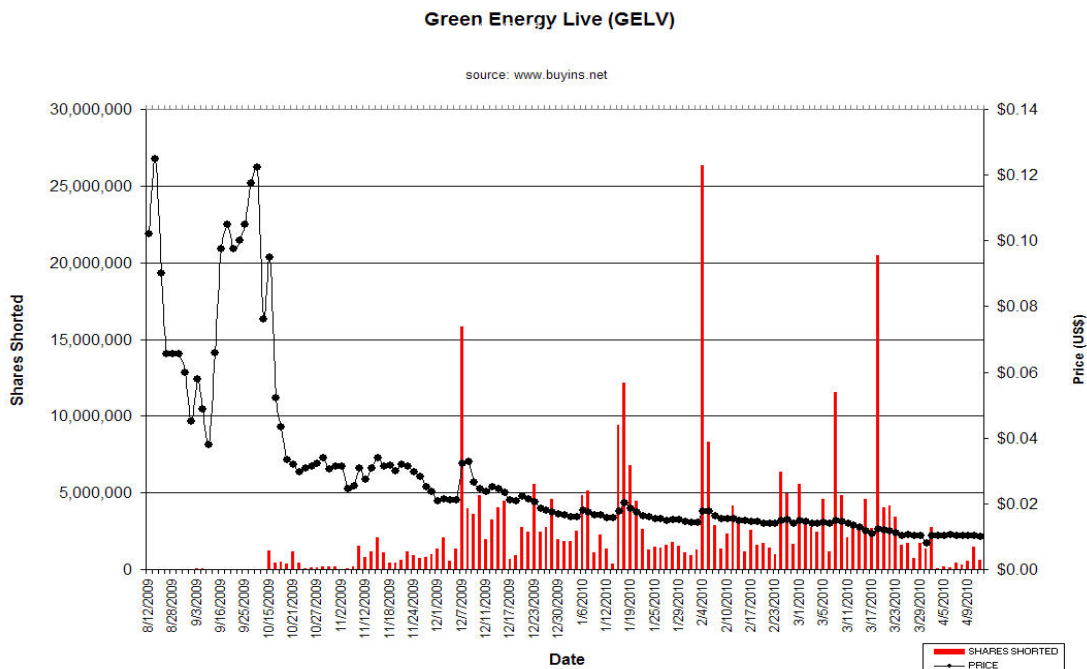

sellers shorting shares of GELV has now come to light as the SEC has finally given Buyins.net access to DAILY short sale data which is updated every night. Protecting GELV from abusive shorting is a priority.

## DAILY FAILURE TO DELIVER DATA (NAKED SHORTS) IN GELV

Significant Failures to Deliver in GELV began in late 2009 and short sellers have been somewhat lax in complying with Regulation SHO. Buyins.net will continue to monitor short sellers for compliance with the borrowing requirements of Regulation SHO.

## NEW DAILY SHORT SALE TRADING VOLUME STARTING 8-3-09

This daily short volume chart of GELV shows shorts have begun shorting the stock aggressively as of late. Approximately 32% of daily volume is short selling.

The above data is used to calculate if a fair market is being made in the shares of GELV. 21% of recent trading days had more buying than selling and 79% had more selling than buying. On days where there was a bias to the market making 82% had bullish biases and 18% had bearish biases. There is a negative market being made in GELV in the past seven weeks, but on days where there is a bias, it is a bullish one.

Friction Factor determines if there is normal or abnormal behavior in the price action of the stock when compared to the buying vs. selling trading statistics. It calculates number of net shares of buying or selling to move price +/- one cent.

Here is how to understand Friction Factor:

1. If Friction Factor is positive, more buying than selling caused GELV's price to rise
2. If Friction Factor is negative, more selling than buying caused GELV's price to fall
3. If Friction Factor is 0, there was no discernable activity either way
4. If Friction Factor is abnormal, it means that there is either a bearish bias or a bullish bias to how market makers are making market in your stock.
