L&L Energy, Inc., through its subsidiaries, engages in production, processing, and sale of coal in the People's Republic of China. The company operates in three segments: Coal Mining, Coal Wholesaling, and Coking Coal. It has the right to extract coal from five mines, including the DaPuAn mine and the SuTsong mine in Yunnan Province; and the WeiShe mine, LaShu mine, and LuoZhou mine in Guizhou Province in China. The company also operates two coal washing plants and three coal wholesale and distribution network in the southwest region of China. It serves customers in steel and electrical/utility industries. L&L Energy, Inc. was founded in 1995 and is headquartered in Seattle, Washington.

Investment Highlights

- **PATTERN SCAN** predicts the price of LLEN expected to move up in the coming weeks based on the appearance of a 'Trend Line Reversal(5+)' pattern. Specifically, a Swing-13 variant of Trend Line Reversal(5+) has been detected. The target is \$4.58.
- **SQUEEZETRIGGER** predicts that when LLEN closes above \$7.39, we expect a short squeeze to begin that could quickly drive the price of LLEN considerably higher.
- **VALUATION** LLEN has a current value of \$11.00 which means the stock is undervalued compared to its Price of \$3.42.

How WealthMakers Market Reads Work:

WealthMakers Market Reads™ provide you with market performance predictions based on proprietary technologies, trading algorithms and data to help you make better, more informed investment decisions. Here's a quick review of our predictive technologies:

- **EARNINGS** Most stock price histories show random or unpredictable movements around earnings reports. But some repeat the same pattern quarter after quarter, year after year. Earnings predicts probability, price move and length of move before and after all US stock earnings reports.
- **FRICTION FACTOR** Friction Factor is based on the relationship between the price of a stock and the volume at which it's bought and sold. Normal and abnormal Friction factor patterns can help you time your buying and selling decisions for maximum earnings potential.
- **GATS** The Global Automated Trading System (GATS) combines neural networks and genetic algorithms to reduce investment risks. GATS selects the highest probability trades in stocks, bonds, options, commodities, currencies and private equities, delivering precise, predictive and profitable data.
- **GROUP SECTOR** Certain institutions can exert buying or selling pressure over an entire industry group, pushing prices higher. Group Sector identifies stocks that most closely match their group's movement and generate powerful group consensus trading signals to help you profit from the herd mentality.
- **PATTERN SCAN** This technology automatically tracks "Trigger Events" that positively or negatively affect the value of a stock — or its perceived value among analysts — ranging from price fluctuations to natural disasters and political shifts. The results reveal patterns that can predict market movements.
- **EVENTS** Events describe the current technical situation in your stock. It displays the technicals, trend conditions and seasonal factors and automatically discovers how that stock has performed in the trading days following the occurrences of the event or combination of events. This technology automatically scans using complex historical queries based on what event is taking place right now in the stock. It then displays the probability, expected return and number of trading days for the expected move.
- **RegSHO NAKED SHORTS** Tracks EVERY failure to deliver in all US stocks and all Threshold Security Lists daily for which stocks have naked short positions
- **SEASONALITY** Seasonality analyzes more than 20 years of data to determine if stocks have a long or short seasonal bias, how many trading days the move is expected to last, the probability of that move and the percentage move the stock is expected to make based on the seasonal bias.
- **SQUEEZE TRIGGER** Our proprietary database of more than 3,500,000,000 short sale transactions allows us to calculate the exact price at which the total short interest is short in each stock. Squeeze Trigger Alerts let you know exactly when a short squeeze will start and how to trade profitably.
- **VALUATION** A stock's value is a function of its forecasted earnings per share and forecasted earnings growth, as well as profitability, interest and inflation rates. Valuation use these metrics to determine at what price a stock is undervalued or overvalued, so that you can make investment decisions accordingly.
- **INSIDER** Significant stock sales or purchases by company "insiders" (officers or directors) can be a predictor of future price movements — up or down. The Insider strategy tracks these actions and correlates them with historical data to give you an investment edge.

Pattern Scan

Tracks "Trigger Events" that positively or negatively affect the value of a stock.

L&L Energy (NASDAQ: LLEN) is predicted to go up in coming weeks based on bullish technical trends that have appeared in the recent performance of the stock. LLEN has demonstrated Trend Line Reversal(5+) strategy Swing-13 with a strength of 1.0/5. The higher the strength, the higher the probability of an accurate prediction.

- The price of LLEN expected to move up in the coming weeks.
- PatternScan has detected that a 'Swing-13' pattern has appeared.
- Specifically, a Swing-13 variant of Trend Line Reversal(5+) has been detected.
- This indicates a high probability that LLEN will move up in the coming weeks.

Squeeze Trigger

We have a proprietary database of all trading in US stocks and maintain massive databases of short sale and naked short sale time and sales data, along with short squeeze SqueezeTrigger prices. We are the only firm that knows the exact price that a short squeeze will start in every US stock.

The Cumulative Squeeze Trigger price for LLEN is 7.39.

This means that when LLEN closes above \$7.39, we expect a short squeeze to begin that could quickly drive the price of LLEN considerably higher.

Friction Factor

Friction Factor determines if there is normal or abnormal behavior in the price action of the stock when compared to the buying vs. selling trading statistics. It shows us how many more shares of buying than selling it takes to move a stock higher by 1 cent, or how many more shares of selling than buying it takes to drop a stock by 1 cent.

Here is how to understand Friction Factor:

- If Friction Factor is positive, more buying than selling caused LLEN's price to rise
- If Friction Factor is negative, more selling than buying caused LLEN's price to fall
- If Friction Factor is 0, there was no discernable activity either way
- If Friction Factor is abnormal, it means that more buying than selling caused the price to drop which is evidence of manipulative activity. In some cases more selling than buying can cause the price to increase. While this is rare, it must be noted as well. Friction Factor raw data.

Valuation

Value is a measure of a stock's current worth. LLEN has a current value of 11.0 per share. Therefore, it is undervalued compared to its Price of \$3.42 per share. Value is computed from forecasted earnings per share, forecasted earnings growth, profitability, interest, and inflation rates. Value increases when earnings, earnings growth rate and profitability increase, and when interest and inflation rates decrease.
